## ACCESS SERVICE

## 6. Switched Access Service (Cont'd)

## 6.1 General (Cont'd)

## 6.1.3 Rate Categories (Cont'd)

## (A) Switched Transport (Cont'd)

## (4) Chargeable Optional Features (Cont'd)

## (d) Line Information Data Base Access

Line Information Data Base (LIDB) Service is provided by the Telephone Company to its customers in support of alternate billing services. Alternate billing services allow the customer's end users to bill calls to an account not necessarily associated with the originating line. LIDB Service supports alternate billing services such as Calling Card, Collect, and Third Number Billing.

LIDB will contain a record for every working line number and Billed Number Group served by the Telephone Company. LIDB also contains Billed Number Screening (BNS) code restrictions for all working line numbers and Billed Number Groups. Other exchange carriers who may store their data in LIDB are requested to provide this data as well. (D)

The LIDB downtime will be less than twelve hours per year. It is capable of processing up to 100 queries per second. In addition, the LIDB will provide a mean response time of no more than 0.25 to 0.5 seconds and shall not exceed 1.0 second for 99 percent of all messages. (D)

The Telephone Company will use the data base administration system to update the LIDB information, e.g., add, delete, and modify customer accounts as customers move, become delinquent on their accounts, or order new service, on a daily basis. (D)

Aggregators or other end users may contact their Telephone Company Business Office to confirm screening service(s) applied to their account.

To ensure the most accurate validation service possible, two audit procedures will be done. The first audit is performed seven nights a week to compare the data contained in the data base administration system and LIDB data. Any differences between these data are resolved the next business day. The second audit, which occurs at least yearly, compares the customer record files and the information contained in the data base administration system.

ACCESS SERVICE

6. Switched Access Service (Cont'd)

6.1 General (Cont'd)

6.1.3 Rate Categories (Cont'd)

(A) Switched Transport (Cont'd)

(4) Chargeable Optional Features (Cont'd)

(d) Line Information Data Base Access (Cont'd)

Customers must purchase Signal Transfer Point Access Service as (D)  
described in (b) preceding in LATA 358 (Chicago, Illinois) for LIDB (D)  
Service. LIDB Service provides the customer's OSS (identified in the  
CCS network by an originating point code) access to billing validation  
data. The LIDB will receive and respond to Calling Card service and (D)  
Billed Number Screening queries as defined in Bellcore publication TR- (D)  
TSV-000954 and TR-NWT-001149.

LIDB Service enables the following functions on an on-line, call-by-call  
basis:

1. Validate a Local Exchange Company telecommunications calling  
card stored in the LIDB.
2. Determine whether the billed line automatically rejects, accepts or  
requires verification of certain calls billed as collect or third number.
3. Determine whether the billed line is a Local Exchange Company  
public or nonworking telephone number.
4. Determine whether the central office code is active or vacant.
